govern the admissibility of evidence this focus on legal argumentation allows students to actively cultivate an understanding of the legal doctrine behind the federal rules of evidence as well as the role that facts and narrative play in legal reasoning exercises. Visual aids and video supplements in each chapter allow students to assess their learning. A single thread that runs through the book is video and case materials surrounding a North Carolina murder trial, State v. Peterson. The trial was memorialized in an award-winning documentary, "The Staircase," directed by Jean Xavier de Lestrade. The casebook follows the trial, including strategies undertaken by counsel and the battles over evidentiary issues that shaped both sides' narratives in the trial. Video excerpts will be provided to the instructor to add a further dimension to student learning and to reach a broad array of learning styles. The teacher's manual will include pedagogical analysis, visual aids related to the text, questions and exercises designed to be used in or out of class, and video excerpts from "The Staircase." This book is part of the Context and Practice series, edited by Michael Hunter Schwartz, Professor of Law and Dean of the University of Arkansas at Little Rock Bowen School of Law. This book helps new nursing students and those applying to nursing programs understand what being a nurse is all about. It explores the essential issues, processes, and theories of nursing practice and is therefore an ideal introductory text as you start your nursing program or as pre-course reading. The revised edition includes a new first chapter on being a nursing student, with insights from students themselves and what will be expected of you in the new all-degree programs. Interviews with real nurses in each of the fields of practice give you an important view into the real world of nursing. The revised third edition includes a new chapter on being a nursing student with student tips and stories updated with and linked to the new NMC standards and essential skills clusters for degree-level education. Activities, case studies, and scenarios help you apply theory to practice, particularly suitable for first-year students and those applying to pre-registration programs. This book is part of the Transforming Nursing Practice series, the first series of books designed to help students meet the requirements of the NMC standards and essential skills clusters for the new degree programs for more information on nursing titles and promotions, please visit uk.sagepub.com/nursing. This textbook will demystify the most important concepts and show why it is important to embrace evidence-informed practice (EIP) in the face of complex and demanding work. It is crucial not to focus solely on the concept of evidence-based practice but to make use of all the evidence at your disposal and allow this evidence to inform your decisions. This book

repercussions for children’s assessment and teacher education; these new discoveries also allow teachers to transcend the old debates in reading instruction—phonics versus whole language—and offer the path to a synthesis at the same time. Research with teachers about their own implementation of methods and the development of their own knowledge about the teaching of literacy has produced a fresh analysis of the practice of literacy teaching inspired by these developments. Teachers, teacher educators, and researchers worked together to produce this volume, which promotes the integration of literacy research and practice.

Neuroprosthetics is an area of intense scientific and clinical interest and rapid progress since the introduction of the cardiac pacemaker in 1932. We have seen developments that include cochlear prostheses techniques for bladder and bowel control, deep brain stimulation and restoration of mobility and respiration to paralyzed individuals. The chapters in this book have been contributed by authors who are recognized internationally in their fields. The result is a comprehensive and up-to-date review that will be invaluable to graduate students, clinicians, and researchers in neuroprosthetics. It is broadly divided into three sections: Section 1 provides a core of knowledge that forms a foundation for the rest of the book and covers the basics of neuroanatomy and neurophysiology. Section 2 describes current clinical applications of neuroprosthetics. Section 3 looks at future developments in the field.

accessible text now covers all three approaches to structural equation modeling: SEM covariance-based SEM, nonparametric SEM, Pearl's structural causal model, and composite SEM. Partial least squares path modeling with increased emphasis on freely available software tools such as the R lavaan package. The text uses data examples from multiple disciplines to provide a comprehensive understanding of all phases of SEM. What to know best practices and pitfalls to avoid. It includes exercises with answers, rules to remember, topic boxes, and a new self-test on significance testing, regression, and psychometrics. The companion website supplies helpful primers on these topics as well as data syntax and output for the book's examples in files that can be opened with any basic text editor. New to this edition, chapters on composite SEM, also called partial least squares path modeling, or variance-based SEM. Conducting SEM analyses in small samples and recent developments in mediation analysis. Coverage of new reporting standards for SEM analyses. Piecewise SEM, also called confirmatory path analysis, comparing alternative models fitted to the same data and issues in multiple group SEM. Extended tutorials on techniques for dealing with missing data in SEM and instrumental variable methods to deal with confounding of target causal effects. Pedagogical features include new self-tests of knowledge about background topics, significance testing, regression, and psychometrics. With scoring keys and online primers. End of chapter suggestions for further reading and exercises with answers. Troublesome examples from real data with guidance for handling typical problems in analyses. Topic boxes on special issues and box rules to remember. Promoting a learn by doing approach including data extensively annotated syntax and output files for all the book's detailed examples. Reprint of the original first published in 1875. A clear and accessible introduction to safeguarding adults in nursing practice with a range of clients and across different settings.
