Textbook of assisted reproductive techniques fourth edition two volume set (Download Only)

textbook of assisted reproductive technologies has become a classic comprehensive reference for the whole team at the ivf clinic the fourth edition comes more conveniently as a set of two separate volumes one for laboratory aspects and the other for clinical applications the text has been extensively revised with the addition of several important new contributions on clinical applications including new chapters on lifestyle factors tailored ovarian stimulation frozen thawed embryo transfer viral disease and religious perspectives as before methods protocols and techniques of choice are presented by eminent international experts also available textbook of assisted reproductive technologies volume one laboratory perspectives textbook of assisted reproductive technologies two volume set textbook of assisted reproductive techniques has become a classic comprehensive reference for the whole team at the ivf clinic the fourth edition comes more conveniently as a set of two separate volumes one for laboratory aspects and the other for clinical applications the text has been extensively revised with the addition of several important new contributions on clinical applications including developing techniques such as picsi imsi and time lapse imaging the second volume focuses on clinical applications and includes new chapters on lifestyle factors tailored ovarian stimulation frozen thawed embryo transfer viral disease and religious perspectives as before methods protocols and techniques of choice are presented by eminent international experts the two volume set includes volume one laboratory perspectives volume two clinical perspectives textbook of assisted reproductive techniques has become a classic comprehensive reference for the whole team at the ivf clinic the fourth edition comes more conveniently as a set of two separate volumes one for laboratory aspects and the other for clinical applications the text has been extensively revised with the addition of several important new contributions on clinical applications including developing techniques such as picsi imsi and time lapse imaging the second volume focuses on clinical applications and includes new chapters on lifestyle factors tailored ovarian stimulation frozen thawed embryo transfer viral disease and religious perspectives as before methods protocols and techniques of choice are presented by eminent international experts the text provides clinical and scientific teams with the a to zs of setting up an embryology laboratory gives research fellows insight into technical developments and supplies seasoned professionals with a review of the latest techniques and advances new to the third edition fully revised and expanded chapters with new information on single embryo transfer artificial gametes pharmacogenetics already established as a classic comprehensive reference for the whole team at the ivf clinic this new edition has been extensively revised with the addition of several important new contributions on laboratory including advanced sperm selection techniques for icsi human embryo biopsy procedures oocyte activation managing an oocyte bank artificial gametes and epigenetics as well as on clinical topics including gnrh agonist triggering segmentation of ivf treatment uterus transplantation and risk and safety management as previously methods protocols and techniques of choice are presented by eminent contributors internationally this book reviews important advances that have made the field of assisted reproduction a dynamic subspecialty and provides insight into other exciting areas of research that will continue to revolutionize the field in the future assisted reproductive technology art involves the use of medical techniques to tackle infertility art includes the usage of procedures such as icsi intracytoplasmic sperm injection ivf in vitro fertilization cryopreservation of embryos or gametes use of fertility medication and so on this book aims to highlight the most recent advances in assisted conception and highlights ongoing and potential future of this field this book consists of 42 chapters which include individualized controlled ovarian stimulation luteal phase stimulation role of adjuvants in controlled ovarian hyperstimulation endometrial receptivity procedure in assisted reproductive technology genetic testing in male infertility medical management of male infertility color doppler in infertility fertility enhancing surgeries in art recurrent pregnancy loss regenerative medicine in infertility oocyte quality morphokinetics in art co culture techniques in art triple parenting etc the book is a comprehensive learning manual providing important information for both scientists and clinicians every chapter is focused on a specific topic and uses international scientific standards of evidence based medicine textbook of assisted reproductive technologies is a truly comprehensive manual for the whole team at the ivf clinic information is presented in a highly visual manner allowing both methods and protocols to be consulted easily the text provides clinical and scientific teams with the a to zs of setting up an embryology laboratory gives research fellows insight into technical developments and supplies seasoned professionals with a review of the latest techniques and advances new to the third edition fully revised and expanded chapters with new information on single embryo transfer artificial gametes pharmacogenetics already established as a classic comprehensive reference for the laboratory issues to implantation cryopreservation endoscopy ultrasound and more a section entitled contemporary thoughts examines the improvement of ivf outcome art and older women and hiv and art and another discusses third party reproduction edited by internationally recognised experts in reproductive medicine this comprehensive guide is highly illustrated with clinical photographs and diagrams to enhance learning previous edition 9781841844497 published in 2004 key points fully revised second edition providing latest advances in art complete section dedicated to third party reproduction highly experienced internationally recognised editor and author team previous edition 9781841844497 published in 2004 now in its fourth volume the biennial review of infertility brings together the most up to date research and clinical information on male and female infertility emerging assisted reproductive techniques and evolving controversies in reproductive medicine an impressive panel of contributors presents cutting edge information in a clear and well balanced manner volume 4 discusses hot topics in contemporary reproductive medicine including stem cell technologies for male infertility the current state of ovarian tissue cryopreservation and time lapse video microscopy of embryos the expanded section on controversies allows for point countercpoint discussion between experts with differing opinions on topics like eset and the use and role of dietary supplements in ivf cycles created to provide an ongoing appraisal of current knowledge the biennial review of infertility stimulates communication amongst all clinicians and researchers working to help couples resolve their infertility assisted reproduction techniques have led to the birth of 4 million babies worldwide assisted reproduction techniques art in particular in vitro fertilization and intra cytoplasmic sperm injection are the most advanced forms of infertility treatment they involve numerous counseling medical surgical and laboratory based steps at each step various problems and complications could be encountered that challenge even the most experienced art practitioners moreover patients with complex medical disorders may require art presenting further challenges assisted reproduction techniques will stimulate resourceful thinking in the art practitioner when faced with these challenges it outlines various management options the reasoning behind them and the evidence on which they are based to enable the practitioner to choose the most suitable solution for the needs of each patient written by 122 internationally renowned experts assisted reproduction techniques follows the patient s journey throughout the whole art process with chapters on counseling and preparation ovarian stimulation oocyte retrieval embryo transfer the luteal phase the art laboratory the male patient the art pregnancy each of the 100 concise chapters includes clinical cases background evidence based practical management options protective measures and key point summaries of the important details assisted reproduction techniques gives a wide ranging practical guide to all those wishing to support couples who cannot conceive naturally established as the definitive reference for the ivf clinic the sixth edition has been extensively revised with the addition of several important new contributions on laboratory topics including kpis for the ivf laboratory quality control in the cloud artificial intelligence ai in gamete and embryo selection demystifying vitrification microfluidics gene editing disaster management and early human embryo development revealed by static imaging as previously methods protocols and techniques of choice are presented by ivf pioneers and eminent international experts cryopreservation methods have become well established as an increasingly important therapeutic strategy in assisted reproduction vitrification in assisted reproduction a user s manual and trouble shooting guide addresses this cryopreservation technique from an academic and technical viewpoint with specific reference to assisted reproduction in humans hence two decades after the first publication on vitrification as an ice crystal free cryopreservation method for embryos this book fulfills the need for a book that considers this new and under utilized cryopreservation technique in detail outlining those techniques that result in success and providing recommended means of overcoming the problems typically encountered the book covers a historical overview of the principles and development of vitrification techniques in animal and humans the various consumables utilized for the vitrification of cells and tissue and suppliers thereof the vitrification and warming technique for oocytes sperm pronuclear stage embryos cleavage stage embryos blastocysts ovarian tissue and embryonic stem cells wherever applicable the setting up including protocol operation maintenance and trouble shooting of the different protocols used for vitrifying various stages of cells and tissues is also covered vitrification in assisted reproduction is an invaluable textbook for clinical and reproductive medicine practitioners and art specialists textbook of assisted reproductive techniques has become a classic comprehensive reference for the whole team at the ivf clinic the fourth edition comes more conveniently as a set of two separate volumes one for laboratory aspects and the other for clinical applications the text has been extensively revised with the addition of several important new contributions on laboratory aspects including developing techniques such as picsi imsi and time lapse imaging as previously methods protocols and Williams Gynecology delivers comprehensive evidence-based coverage of the full spectrum of gynecologic healthcare and disease management from benign general gynecology to reproductive endocrinology infertility and menopause to female pelvic medicine and reconstructive surgery to gynecologic oncology. Hundreds of original drawings and tables complement the text, helping you approach every diagnosis and treatment consistently and accurately while treatment algorithms, differential diagnosis boxes, and other features make finding the right answers quick and easy. The atlas of gynecologic surgery section covers benign gynecologic conditions minimally invasive surgery for female pelvic reconstruction and surgeries for gynecologic malignancies. New content on minimally invasive procedures, benign gynecology, urogynecology, gynecologic oncology, and reproductive endocrinology. Full-color figures depicting operative techniques illustrate gynecologic anatomy. Chapter invaluable for surgeons covers a wide range of surgical operations. Each one illustrated in painstaking detail. A cost-effective option to purchasing two separate textbooks. Revised from the 1980 industrial organic chemistry book. Expanded coverage of the new technologies used in medicine. Robotics, the latest in American College of Obstetricians and Gynecologists guidelines. Get the highest score possible. The obstetrics and gynecology board review eliminates the guesswork associated with traditional multiple choice questions. The rapid fire questions cover the score you need to improve your knowledge and confidence. The quick hit q a format consists of short clinical questions with brief answers. This book is your most effective weapon when preparing for the board exams. The format of obstetrics and gynecology board review eliminates the guesswork associated with traditional multiple choice questions.
