The articles selected for this volume draw on game theory, political science, psychology, sociology, and anthropology to consider how the process of dispute resolution is altered, challenged, and made more complex by the presence of multiple parties and or multiple issues. The volume explores issues of coalition formation, defection, collaboration, commitments, voting practices, and joint decision making in settings of increasing human complexity. Also included are examples of concrete uses of deliberative democracy processes taken from new applications of complex dispute resolution theory and practice. The selected essays represent the latest theoretical advances and challenges in the field and demonstrate attempts to use dispute resolution theory in a wide variety of settings such as political decision making, policy formation, regulatory matters, environmental disputes, healthcare, community disputes, constitutional formation, and in many other controversial issues in the polity.

this book presents a theory to account for why and when politics revolves around one axis of social cleavage instead of another it does so by examining the case of zambia where people identify themselves either as members of one of the country's seventy three tribes or as members of one of its four principal language groups the book accounts for the conditions under which zambian political competition revolves around tribal differences and under which it revolves around language group differences drawing on a simple model of identity choice it shows that the answer depends on whether the country operates under single party or multi party rule during periods of single party rule tribal identities serve as the axis of electoral mobilization and self identification during periods of multi party rule broader language group identities play this role the book thus demonstrates how formal institutional rules determine the kinds of social cleavages that matter in politics

Uganda has attracted much attention and political visibility for its significant economic recovery after a catastrophic decline in her groundbreaking book Aili Mari Tripp provides extensive data and analysis of patterns of political behavior and institutions by focusing on the unique success of indigenous women’s organizations. Tripp explores why the women’s movement grew so dramatically in such a short time after the national resistant movement took over in 1986. Unlike many African countries where organizations and institutions are controlled by a ruling party or regime, the Ugandan women’s movement gained its momentum by remaining autonomous.

this book provides a comprehensive introduction to conversational ai while the idea of interacting with a computer using voice or text goes back a long way it is only in recent years that this idea has become a reality with the emergence of digital personal assistants smart speakers and chatbots advances in ai particularly in deep learning along with the availability of massive computing power
and vast amounts of data have led to a new generation of dialogue systems and conversational interfaces. Current research in conversational AI focuses mainly on the application of machine learning and statistical data-driven approaches to the development of dialogue systems; however, it is important to be aware of previous achievements in dialogue technology and to consider to what extent they might be relevant to current research and development. Three main approaches to the development of dialogue systems are reviewed: rule-based systems that are handcrafted using best practice guidelines, statistical data-driven systems based on machine learning, and neural dialogue systems based on end-to-end learning. Evaluating the performance and usability of dialogue systems has become an important topic in its own right, and a variety of evaluation metrics and frameworks are described. Finally, a number of challenges for future research are considered, including multimodality in dialogue systems, visual dialogue data, efficient dialogue model learning using knowledge graphs, discourse and dialogue phenomena, hybrid approaches to dialogue systems development, dialogue with social robots, and in the Internet of Things. Social and ethical issues are also discussed.

this book offers the first comprehensive treatment of multi level water governance developing a conceptual and analytical framework that captures the complexity of real water governance systems while also introducing different approaches to comparative analysis applications illustrate how the ostensibly conflicting goals of deriving general principles and of taking context specific factors into account can be reconciled specific emphasis is given to governance reform adaptive and transformative capacity and multi level societal learning the sustainable management of global water resources is one of the most pressing environmental challenges of the 21st century many problems and barriers to improvement can be attributed to failures in governance rather than the resource base itself at the same time our understanding of complex water governance systems largely remains limited and fragmented the book offers an invaluable resource for all researchers working on water governance topics and for practitioners dealing with water governance challenges alike

This book contains contributions to two joint seminars organized by the Universities of Kiel and St. Petersburg. Both international commercial arbitration and maritime law are characterized by a mixture of international and national sources. The two subjects are brought together here in one
volume as maritime disputes often go to arbitration and both areas show from a theoretical perspective a number of interesting parallels and differences. Germany and Russia have ratified the major conventions in these fields but many issues are left to domestic law and deserve a comparative evaluation.
