*Critical Essays on "Causation and Responsibility"* 2013-10-14 the press and other media constantly report news stories about dangerous chemicals in the environment miracle cures the safety of

Historiography and Causation in Psychoanalysis 2013-05-13 this text is an attempt to trace out a line of development in the understanding of how things happen from origins in infancy to mature forms in adulthood there are two distinct but related ways in which people understand things as
happening denoted by the terms causation and action this book is concerned with both the central claim and organizing principle of the book is that by the end of the second year of life children have differentiated two core theories of how things happen these theories deal with causation and action the two theories have a common point of origin in the infant s experience of producing actions but thereafter diverge both in content and in realm of application once established the core theories of causation and action never change but form a permanent metaphysical underpinning on which subsequent developments in the understanding of how things happen are erected the story of development is therefore largely the story of how further concepts become attached to integrated with the core theories although the developmental and adult literatures on causal understanding appear at first glance to have little in common in fact this appearance is illusory and the idea of two theories helps to bring the two literatures in contact with each other the book begins with a survey of the main philosophical ideas about causation and action following this the possible origins of understanding in infancy are reviewed and separate chapters then deal with the development of understanding of action and causation through childhood this is then linked to the adult understanding of action and causation and the literature on adult causal attribution and causal judgement is reviewed from this perspective

analysis of academic and judicial responses to the problem of evidential uncertainty in causation in negligence it seeks to bring clarity to what has become a notoriously complex area by adopting a clear approach to the function of the doctrine of causation within a corrective justice based account of negligence liability it first explores basic causal models and issues of proof including the role of statistical and epidemiological evidence in order to isolate the problem of evidential uncertainty more precisely application of richard wright’s ness test to a range of english case law shows it to be more comprehensive than the but for test that currently dominates thereby reducing the need to resort to additional tests such as the wardlaw test of material contribution to harm the scope and meaning of which are uncertain the book builds on this foundation to explore the solution to a range of problems of evidential uncertainty focusing on the fairchild principle and the idea of risk as damage as well as the notion of loss of a chance in medical negligence which is often seen as analogous with increase in risk in an attempt to bring coherence to this area of the law

the past few decades have seen an explosion of research on causal reasoning in philosophy computer science and statistics as well as descriptive work in psychology in causation with a human face james woodward integrates these lines of research and argues for an understanding of how each can inform the other normative ideas can suggest interesting experiments while descriptive results can suggest important normative concepts woodward’s overall framework builds on the interventionist treatment of causation that he developed in making things happen normative ideas discussed include proposals about the role of invariant or stable relationships in successful causal reasoning and the notion of proportionality he argues that these normative ideas are reflected in the causal judgments that people actually make as a descriptive matter woodward also discusses the common philosophical practice particularly salient in philosophical accounts of causation of appealing to intuitions or judgments about cases in support of philosophical theses he
