Forensics is the application of scientific methods to crime solving. Law enforcement agencies rely on forensic scientists to document and process evidence including fingerprints, DNA, and other forensic science techniques. Forensic science, also known as criminalistics, is the application of science principles and methods to support legal decision making in matters of criminal and civil law during criminal investigation. It is governed by legal standards of admissible evidence and criminal procedure. Any science used for the purposes of the law is a forensic science.

Forensic science is used around the world to resolve civil disputes, justly enforce criminal laws and government regulations, and protect public health. Forensic science is a practical academic discipline that involves solving puzzles. Forensic scientists use their knowledge of basic science fields like biology, chemistry, and physics. Forensic science is the use of scientific methods or expertise to investigate crimes or examine evidence that might be presented in a court of law.

Forensic science comprises a diverse array of disciplines, including fingerprint and DNA analysis, anthropology, and wildlife forensics. Forensic science is the application of the methods of the natural and physical sciences to matters of criminal and civil law. Forensic science can be involved not only in investigation and prosecution of crimes such as rape, murder, and drug trafficking but also in matters in which a crime has not been committed.
