stagnation in cancer control including the role played by major stakeholders and advocates a coordinated national effort akin to the apollo program to unveil the causes of cancer and their mastery in examine the topics of how to successfully make contracts remedies other than damages namely specific performance injunctions and restitution the law relating to contracts is set out and explained under clear headings and in straightforward language in addition every major irish case on contract law is considered particular emphasis is placed on practical matters such as the construction of contracts breach of contract and contractual remedies this edition also includes a number of key aspects from the high court court of appeal and supreme court on every area this title was written by a practitioner who is also an academic the book sets out the principles and case law in a clear and structured manner with easy to use headings and an easy to navigate format the information is both of an academic interest and with serious practical relevance practitioners students and anyone who has to deal with contracts in the course of their work will benefit from this most welcome new edition the idea of this book grew out of a symposium that was held at stony brook in september 2012 in celebration of david s warren s fundamental contributions to computer science and the area of logic programming in particular logic programming lp is at the nexus of knowledge representation artificial intelligence mathematical logic databases and programming languages it is fascinating and intellectually stimulating due to the fundamental interplay among theory systems and applications brought about by logic logic programs are more declarative in the sense that they strive to be logical specifications of what to do rather than how to do it and thus they are high level and easier to understand and maintain yet without being given an actual algorithm lp systems implement the logical specifications automatically several books cover the basics of lp but focus mostly on the prolog language with its incomplete control strategy and non logical features at the same time there is generally a lack of accessible yet comprehensive collections of articles covering the key aspects in declarative lp these aspects include among others well founded vs stable model semantics for negation constraints object oriented lp updates probabilistic lp and evaluation methods including top down vs bottom up and tabling for systems the situation is even less satisfactory lacking accessible literature that can help train the new crop of developers practitioners and researchers there are a few guides on warren s abstract machine wam which underlies most implementations of prolog but very little exists on what is needed for constructing a state of the art declarative lp inference engine contrast this with the literature on say compilers where one can first study a book on the general principles and algorithms and then dive in the particulars of a specific compiler such resources greatly facilitate the ability to start making meaningful contributions quickly there is also a dearth of articles about systems that support truly declarative languages especially those that tie into first order logic mathematical programming and constraint solving lp helps solve challenging problems in a wide range of application areas but in depth analysis of their connection with lp language abstractions and lp implementation methods is lacking also rare are surveys of challenging application areas of lp such as bioinformatics natural language processing verification and planning the goal of this book is to help fill in the previously mentioned void in the lp literature it offers a number of overviews on key aspects of lp that are suitable for researchers and practitioners as well as graduate students the following chapters in theory systems and applications of lp are included understanding and developing expertise is an important concern for any researcher or practitioner working in elite or high performance sport whether it is identifying talented young athletes or developing methods for integrating cutting edge sport science into daily coaching practice scientists coaches and researchers all need to understand the skills looking beyond the legal relationship of carrier shipper and carrier receiver this book examines the important articles of the rotterdam rules that affect the ability of the trading protagonists to perform their sale contract this book promotes an interdisciplinary approach to maintenance through the presentation of practical and theoretical research in the field of electrical civil and mechanical engineering the goal is to raise the level of maintenance knowledge taking into account the continuous advancement of engineering and technology in all spheres of economy infrastructure and public services this book contains papers presented at the 30th international conference on organization and technology of maintenance oto 2021 and the conference was held on josip juraj strossmayer university of osijek faculty of electrical engineering computer science and information technology osijek on 10 11 december 2021 the book brings 36 original papers written by authors from ten countries that underwent a blind review process by the international review board members the conference covers the topics as organization and management of maintenance maintenance technologies quality management in system maintenance information systems in maintenance product lifecycle management design for maintainability material and structure properties of technical systems and environmental safety diagnosis and prognosis of failures and operational malfunctions design optimization for maintenance maintenance in technical systems analysis of efficiency and cost effectiveness of maintenance influence of maintenance on the environment and employee safety maintenance legislation and education for maintenance the papers presented in the book reflect the current state of approach to maintenance as an interdisciplinary field the oto conference proved itself as an ideal opportunity for communication between scientists and experts in maintenance practice with the aim to raise the level of expertise and introduce new methods and maintenance procedures into everyday practice nuclear receptors nr are ligand induced activated transcription factors that are involved in the regulation of gene expression and the control of a wide range of physiological processes they play a crucial role in the development and function of many tissues and organs and are implicated in a variety of diseases due to their involvement in various biological processes nuclear receptors have been extensively studied and their role in health and disease has been extensively documented because of their importance in regulating gene expression and influencing cellular functions understanding the mechanisms by which nuclear receptors mediate their effects is crucial for developing effective therapeutic strategies to combat diseases that involve disruptions in nuclear receptor signaling nuclear receptors are classified into seven superfamilies based on their structural and functional similarities the ligand binding domain of nuclear receptors plays a key role in their function it typically contains a conserved motif called the ligand binding domain which is responsible for ligand recognition and subsequent activation of the receptor although the ligand binding domain is highly conserved across nuclear receptors it is also highly variable and this variability contributes to their specificity in binding to different ligands and activating different target genes understanding the relationship between the ligand binding domain and ligand specificity is essential for developing targeted therapeutic strategies for diseases associated with disrupted nuclear receptor function the ligand binding domain is rich in hydrophobic amino acids which facilitate the interaction with the hydrophobic ligands other functional motifs in the ligand binding domain include the d-box which is involved in receptor recruitment and the t-box which is required for receptor activation understanding the structure and function of the ligand binding domain is critical for developing targeted therapeutic strategies for diseases associated with disrupted nuclear receptor function it enables the design of small molecule inhibitors that can selectively block the function of specific nuclear receptors this is particularly important in the development of cancer therapeutics such as selective receptor modulators which can selectively target and modulate the function of specific nuclear receptors with the aim of inhibiting their activity and thereby controlling the expression of disease relevant genes the ligand binding domain is a key target for drug discovery efforts as it is the primary determinant of ligand specificity and receptor activation new methods for the development of selective ligands and receptor modulators are being constantly explored to further our understanding of nuclear receptor biology and to develop targeted therapeutic strategies
of nrs their interactions with new potential drugs endocrine disruptors such as animal and human food toxins food additives or industry residuals it is mandatory to approach the problem from a different point of view a molecular modelling approach steered synthesis and in vitro and in vivo tests etc the aim of this book is to provide a state of the art review on investigations into nuclear receptors along with consulting editor dr lucky jain dr goudy has created a current issue that looks at ent issues with newborns expert authors from top institutions have submitted clinical reviews on the following topics airway anomalies fetal evaluation and airway management hearing loss and failed nbhs aspiration and dysphagia in the newborn cleft lip and palate microtia and facial anomalies cranial synostosis pierre robin sequence vascular malformations choanal atresia and other nasal masses congenital neck masses subglottic stenosis tracheostomy in the newborn and stridor readers will come away with the information they need to make informed clinical decisions to improve patient outcomes this book discusses multilingual postcolonial common law focusing on malaysia s efforts to shift the language of law from english to malay and weighing the pros and cons of planned language shift as a solution to language based disadvantage before the law in jurisdictions where the majority of citizens lack proficiency in the traditional legal medium through analysis of legislation and policy documents interviews with lawyers law students and law lecturers and observations of court proceedings and law lectures the book reflects on what is entailed in changing the language of the law it reviews the implications of societal bilingualism for postcolonial justice systems and raises an important question for language planners to consider if the language of the law is changed what else about the law changes seasonality is a severe constraint to sustainable rural livelihoods and a driver of poverty and hunger particularly in the tropics many poor people in developing countries are ill equipped to cope with seasonal variations which can lead to drought or flood and consequences for agriculture employment food supply and the spread of disease the subject has assumed increasing importance as climate change and other forms of development disrupt established seasonal patterns and variations this book is the first systematic study of seasonality for over twenty years and it aims to revive academic interest and policy awareness of this crucial but neglected issue thematic chapters explore recent shifts with profound implications for seasonality including climate change hiv aids and social protection case study chapters explore seasonal dimensions of livelihoods in africa ethiopia kenya malawi bangladesh china india and latin america peru others assess policy responses to adverse seasonality for example through irrigation migration and seasonally sensitive education the book also includes innovative tools for monitoring seasonality which should enable more appropriate responses this book presents the latest evidence based guidelines for perinatal management and is designed to help obstetricians and neonatologists minimize complications and offer patients the best possible care since 1960 there has been a significant increase in basic and clinical investigations on normal and pathological pregnancy in the developed world this has provided insights into the physiopathology of pregnant women fetuses and newborns and led to the development of new technologies bringing about a new medical subspecialty perinatal medicine the book is divided into eight main sections the first examines basic periconceptional care and discusses the ethical aspects of perinatology the next section focuses on prenatal considerations such as the nutritional aspects of gestation and puerperium physical exercise during pregnancy routine laboratory tests prenatal care of multiple gestations and the role of the neonatologist in prenatal care the third and fourth sections then explore fetal evaluation and clinical intercurrences in pregnancy respectively the next section addresses pregnancy complications prevention diagnosis and management the sixth section covers the basic aspects of congenital infections and the seventh examines labor and delivery aspects lastly the final section includes chapters on neonatal assistance written by leading experts in obstetrics neonatology and perinatology this thoroughly updated the idea of this book grew out of a symposium that was held at stony brook in september 2012 in celebration of david s warren s fundamental contributions to computer science and the area of logic programming in particular logic programming lp is at the nexus of knowledge representation artificial intelligence mathematical logic databases and programming languages it is fascinating and intellectually stimulating due to the fundamental interplay among theory systems and applications brought about by logic logic programs are more declarative in the sense that they strive to be logical specifications of what to do rather than how to do it and thus they are high level and easier to understand and maintain yet without being given an actual algorithm lp systems implement the logical specifications automatically several books cover the basics of lp but focus mostly on the prolog language with its incomplete control strategy and non logical features at the same time there is generally a lack of accessible yet comprehensive collections of articles covering the key aspects in declarative lp these aspects include among others well founded vs stable model semantics for negation constraints object oriented lp updates probabilistic lp and evaluation methods including top down vs bottom up and tabling for systems the situation is even less satisfactory lacking accessible literature that can help train the new crop of developers practitioners and researchers there are a few guides on warren s abstract machine wam which underlies most implementations of prolog but very little exists on what is needed for constructing a state of the art declarative lp inference engine contrast this with the literature on say compilers where one can first study a book on the general principles and algorithms and then dive in the particulars of a specific compiler such resources greatly facilitate the ability to start making meaningful contributions quickly there is also a dearth of articles about systems that support truly declarative languages especially those that tie into first order logic mathematical programming and constraint solving lp helps solve challenging problems in a wide range of application areas but in depth analysis of their connection with lp language abstractions and lp implementation methods is lacking also rare are surveys of challenging application areas of lp such as bioinformatics natural language processing verification and planning the goal of this book is to help fill in the previously mentioned void in the lp literature it offers a number of overviews on key aspects of lp that are suitable for researchers and practitioners as well as graduate students the following chapters in theory systems and applications of lp are included
