Anaesthesia for the High Risk Patient

2002-01-02

This book provides practical information on the management of high risk patients presenting for surgery as well as sufficient background information to enable an understanding of the principles and rationale behind their anaesthetic management. The content reflects the needs of a broad readership and presents information not readily available in similar books, e.g., a summary of all Cepod reports perioperative renal failure, the role of the cardiology consult and indications for admission to ICU and HDU. The format of each chapter is designed to provide rapid access to important information with key facts and advice presented concisely. Important references that highlight controversies within a subject and suggestions for useful further reading are also presented. The book will be useful not only as an aide memoire for the FRCA and other examinations in anaesthesia but also as a useful quick reference for all operating theatre ICU, CCU, and HDU-based personnel.

Anesthesia in High-Risk Patients

2017-11-06

This book describes the approach to anesthetic and perioperative management in different categories of high risk patient scheduled to undergo elective noncardiac surgery. Individual sections focus on patients with conditions entailing cardiac and hemodynamic risks, respiratory risks, renal and metabolic risks, neurological risks, and other forms of risk. For each condition, up-to-date guidance is provided on risk evaluation, risk stratification, and intraoperative and postoperative anesthetic management. This is the first time that such different clinical situations have been gathered together in a single textbook of anesthesiology. All of the authors are international experts with extensive clinical experience. The aim is to provide trainee anesthesiologists with clear guidance that will prove invaluable when managing a wide range of patients with serious illnesses or conditions that pose a significant anesthetic risk. The book will also serve as a valuable reference for more experienced anesthesiologists and intensivists.

Prevention and Treatment of Osteoporosis in the High-Risk Patient

2005-01-25

The outcome of recent clinical trials in osteoporosis was the impetus for this volume in these studies of two bisphosphonates, an interaction between bone mineral density (BMD) and the treatment effect was seen such that these agents appeared to lose their effect as BMD increased to practitioners. This is counterintuitive: why should treatment work and not prevention? This book uses a solid evidence base to explore such issues without limiting itself to specialist concerns. It tackles other facets of the disease as well such as the economic aspects. Prevention and treatment of osteoporosis in the high-risk patient is intended for physicians of all specialties who see patients who have or might be at risk of developing osteoporosis.
A concise summary of perioperative management of high risk surgical patients bridging the gap between the operating theatre and ICU.

**Anesthesia and Perioperative Care of the High-Risk Patient**

It is well known that certain diseases and patient conditions are associated with increased perioperative risk. The aim of this book is to define and identify the clinical factors that warrant a broader and more detailed assessment of preoperative surgical risk in difficult and unusual clinical settings. One of the sections is dedicated to the main pathway of peri and post-surgical critical care based on the patient specific deterioration risk and associated diseases. Here, a panel of selected experts describes the correct patient-oriented pathways for complex or unscheduled surgical operations in order to reduce the operative risk. In addition, the book describes the latest trends in minimally invasive surgical techniques that are associated with peri and post-operative risk reduction and provides an overview of recent advances in surgical simulation focusing on perspectives in surgical research to increase patient safety. Guidance is also provided on extracorporeal membrane oxygenation (ECMO), left ventricular assist devices (LVADs), and their management in patients requiring emergency surgery. The book will help surgical trainees recognize cases with the highest surgical risk and identify the most common complications at an early stage.

Today's psychiatrists practice in an environment that poses difficult challenges, both in terms of treatment time and duration, which are limited by insurance requirements. Many facilities are understaffed, and split treatment arrangements are typical. High-risk acutely suicidal patients are admitted to inpatient units for short lengths of stay. In addition, law now plays a pervasive role in the practice of psychiatry. The doctor-patient relationship is no longer defined solely by the involved parties. Clinicians must juggle these requirements and limitations while providing the very best care to their patients, especially those at high risk of preventing suicide. Clinical assessment and management provides the wisdom of Dr. Robert I. Simon's vast clinical experience combined with the latest insights from the evidence-based psychiatric literature to offer a cutting-edge survey of suicide prevention and management techniques. The author addresses sudden improvement in high-risk suicidal patients, a phenomenon both common and perilous. With techniques for determining whether the improvement is real or feigned, the book explores in depth the misuse of suicide risk assessment forms with emphasis on their inherent limitations. The book examines the many entrenched myths and traditions about suicide exposure, the critical light of evidence-based medicine, the concept of imminent suicide risk, and the myth of passive suicide ideation. It discusses the continuum of chronic and acute high-risk suicidal patients, the fluidity with which one can become the other, and the difficulty in assessing these patients. The book explores how the law and psychiatry interact in frequently occurring clinical situations and the importance of therapeutic risk management. It contains a variety of features that illuminate the subject and enhance the reader's understanding, including illustrative case studies combined with commentary on commonly occurring but complex clinical situations, key points at the end of each chapter that identify critical information, a suicide risk assessment self-test, a teaching instrument that consists of fifty questions designed to enhance clinician suicide risk assessment, and incorporating evidence-based risk and protective factors. Dr. Simon provides a nuanced, empathic yet pragmatic perspective on identifying, assessing, and managing the suicidal patient while successfully navigating a complex legal and clinical environment that poses its own risks to the practitioner.

extracorporeal membrane oxygenation (ECMO) has evolved into an exciting and valuable tool to assist in the management of patients experiencing cardiogenic shock, severe acute respiratory failure, or often a combination of both, while outcomes remain less than ideal. They continue to improve with team experience, better patient selection, and a growing understanding of the nuances of managing patients who require mechanical circulatory support. Patients requiring ECMO are often extremely sick and have complex problems. Initiating therapy before the development of end-organ damage is critical. Without doubt, teamwork, guidelines, and protocols are cornerstone concepts for clinical and program success. All topics that are emphasized in this text are further outlined in topics that help address some of the key challenges providers face when considering and applying extracorporeal support therapies to the evolving spectrum of acutely ill patients.

This book describes how an automated patient medical record could be built that could evolve into a universal patient record. Such a universal patient record would change medical care from a focus on short-term care to one oriented to long-term preventive care. It would remove patient care from being the province of the single physician to that of the responsibility of many different healthcare providers possibly located anywhere in the world.
