neufert's architects data is an essential reference for the initial design and planning of a building project. It provides in one concise volume the core information needed to form the framework for the more detailed design and planning of any building project. Organised largely by building type, it covers the full range of preliminary considerations and with over 6200 diagrams, it provides a mass of data on spatial requirements. Most illustrations are dimensioned and each building type includes plans, sections, site layouts, and design details. An extensive bibliography and a detailed set of metric/imperial conversion tables are included. Since it was first published in Germany in 1936, Ernst Neufert's handbook has been progressively revised and updated through 39 editions and many translations. This fourth English language edition is translated from the 39th German edition and represents a major new edition for an international English-speaking readership. Reviews of the previous edition Neufert's Architects Data was the first book I bought when I started my studies in architecture. It was invaluable for me then and it is still a useful aid in my designs. Cesar Pelli with this thorough rewrite, Neufert has produced yet again an invaluable reference book. A book that the architects' journal

The Bureau of Mines entered into a cooperative agreement with an eastern Kentucky coal mining company to comprehensively redesign the flow of equipment and supplies throughout its underground mines. Items were tracked from delivery to the warehouse and from surface storage areas to their final usage locations. Underground three underground mines were visited, and a great variety of tasks were videotaped for subsequent laboratory analysis. The analysis of particular interest were tasks that required manual handling of the supplies or equipment components, activities such as handling daily supplies, concrete blocks, rock dust, and cross beams, and handling or lifting the...
continuous miner power cable were determined to be the most hazardous recommendations to the company included redesigned surface storage areas to facilitate the use of forklift vehicles to load the underground supply cars designs were also developed for different mechanical assist devices to help in unloading the supply cars underground and to handle equipment maintenance tasks underground additionally the videotapes of the underground manual handling tasks became the basis for simulating those activities in controlled laboratory conditions this testing will contribute to developing guidelines for proper lifting techniques for low seam coal mines
