It was recognized in these discussions that none of the locally available systems for symbolic computation provided the facilities that should be expected for symbolic computation in modern computing environments. We concluded that since the basic design decisions for the then current symbolic systems such as Altran Camal Reduce and Maple were based on 1960s computing technology, it would be wise to design a new system, Macsyma, from scratch, taking advantage of the software engineering technology which had become available since then as well as drawing from the lessons of experience. Maple's basic features, such as elementary data structures, input and output arithmetic with numbers, and elementary simplification, are coded in a systems programming language for efficiency. increasingly electroconvulsive therapy (ECT) is recognized as a proven effective and even life-saving intervention in certain mood and thought disorders when other treatments have had little or no effect. Despite the proven efficacy and safety of this standard treatment in psychiatry, its availability is variable. Part of this disparity in access is related to misunderstanding by laypersons regarding the treatment and its potential adverse effects. Adequate education and training of psychiatrists and their support staff are essential to ensuring patients access to this vital treatment tool.
