what is science for a child? How do children learn about science and how to do science? Drawing on a vast array of work from neuroscience to classroom observation, taking science to school provides a comprehensive picture of what we know about teaching and learning science from kindergarten through eighth grade. By looking at a broad range of questions, this book provides a basic foundation for guiding science teaching and supporting students in their learning. Taking science to school answers such questions as when do children begin to learn about science? Are there critical stages in a child's development of such scientific concepts as mass or animate objects? What role does nonschool learning play in children's knowledge of science? How can science education capitalize on children's natural curiosity? What are the best tasks for books, lectures, and hands-on learning? How can teachers be taught to teach science? The book also provides a detailed examination of how we know what we know about children's learning of science. About the role of research and evidence, this book will be an essential resource for everyone involved in K-8 science education, teachers, principals, boards of education, teacher education providers, and accreditors. Education researchers, federal education agencies, and state and federal policy makers will also find it useful for parents and others interested in how children learn.

This report from the nation's report card provides further information about students' lack of preparation in science, their apparent disinclination to enroll in challenging science courses, and the comparatively low achievement of black and Hispanic students, females, economically disadvantaged students, and non-college-bound students. These science report card results are based on a national survey of nearly 20,000 students in grades 4, 8, and 12, conducted during the winter and spring of 1990, by the National Assessment of Educational Progress (NAEP). The results from the 1990 science assessment were analyzed using item response theory (IRT) methods, allowing NAEP to describe performance across the grades and subpopulations on a 0 to 500 scale along this continuum. Four levels of proficiency were defined: level 200 understands simple scientific principles, level 250 applies general scientific information, level 300 analyzes scientific procedures and data, and level 350 integrates specialized scientific information. Overall science proficiency by race, ethnicity, gender, region, type of community, type of school, parents' highest level of education, additional home factors, types of high school programs, and plans after high school was determined. Chapters include: 1. Overall science proficiency for the nation and demographic subpopulations, 2. Science proficiency by content areas for the nation and subpopulations, and in relation to high school course taking, 3. Attitudes toward science education and students' experiences in science, 4. Toward scientific literacy for all instructional goals and practices, and 5. Who is teaching science to the profile of the eighth-grade science teaching force. The profile survey on teachers included data on race, ethnicity, years of teaching experience, level and type of teaching certification, academic training, teaching perceptions, and more.
