karen honery s psychoanalytic social theory is built on the assumption cultural and social conditions especially experiences during childhood play a large role in the determination of personality people whose needs for affection and love do not meet satisfaction during the childhood stage of life develop basic hostility toward their parents resulting in basic anxiety honery theorizes people adopt one of three fundamental styles in relating to others in combating basic anxiety including moving toward moving against or moving away from people neurotics are compelled to rigidly rely on only one style in comparison to normal people who can make use of either of the three modes in relating to others the compulsive behavior of neurotics generates intrapsychic conflict taking the form of either self hatred or an idealized self image the expression of idealized self image is through neurotic pride neurotic claims or neurotic search for glory the expression of self hatred is through alienation from self or self contempt many of the ideas of honery s writings apply to normal individuals although mostly concerns itself with the neurotic personality this description of honery s theory and of the woman behind the theory discusses her ideas on psychotherapy examines her views on feminine psychology and compares her ideas to those of freud honery s views on personality reflect her life experience the insights of honery derive from her effort to relieve personal pain along with the pain of her patients the insights of honery may have been less profound had her suffering been less intense the life of karen honery is that of a somewhat troubled woman

**The Meaning and Measurement of Neuroticism and Anxiety 1961**
this masterful new book presents for the first time an approach to psychotherapy based on shapiro's classic neurotic styles. a series of eloquent chapters illustrated with clinical vignettes bring to bear his brilliant ideas about character development on the actual conduct of psychotherapy. this long awaited volume richly fulfills its promise. few writers on the psychotherapy scene have as interesting or as important things to say. this beautifully written book is fresh, insightful, and wise. paul wachtel, ph.d.

Neurosis in Society 1983

one of the most original psychoanalysts after freud, karen horney pioneered such now familiar concepts as alienation, self-realization, and the idealized image. and she brought to psychoanalysis a new understanding of the importance of culture and environment. karen horney was born in hamburg, germany in 1885 and studied at the university of berlin receiving her medical degree in 1913. from 1914 to 1918, she studied psychiatry at berlin lankwitz, germany, and from 1918 to 1932 taught at the berlin psychoanalytic institute. she participated in many international congresses among them the historic discussion of lay analysis chaired by sigmund freud. dr. horney came to the united states in 1932 and for two years was associate director of the psychoanalytic institute, chicago. in 1934, she came to new york and was a member of the teaching staff of the new york psychoanalytic institute. until 1941, when she became one of the founders of the association for the advancement of psychoanalysis and the american institute for psychoanalysis in neurosis and human growth. dr. horney discusses the neurotic process as a special form of the human development. the antithesis of healthy growth, she unfolds the different stages of this situation, describing neurotic claims, the tyranny or inner dictates, and the neurotic's solutions for relieving the tensions of conflict in such emotional attitudes as domination, self-effacement, dependency, or resignation. throughout, she outlines with penetrating insight the forces that work for and against the person's realization of his or her potentialities. this 40th anniversary edition includes a new preface by stephanie steinfeld, ph.d. and jeffrey rubin, m.d., of the american institute for psychoanalysis.

Neuroticism 2011

first published in 1999, psychoanalysis first developed as a method of therapy in the strict medical sense. freud had discovered that certain circumscribed disorders that have no discernible organic basis, such as hysterical convulsions, phobias, depressions, drug addictions, functional stomach upsets, can be cured by uncovering the unconscious factors that underlie them. in the course of time, disturbances of this kind were summarily called neurotic. therefore, humility as well as hope is required in any discussion of the possibility of psychoanalytic self-examination. it is the object of this book to raise this question seriously, with all due consideration for the difficulties involved.
