The Invention of Science 2015-09-17

we live in a world made by science how and when did this happen this book tells the story of the extraordinary intellectual and cultural revolution that gave birth to modern science and mounts a major challenge to the prevailing orthodoxy of its history before 1492 it was assumed that all significant knowledge was already available there was no concept of progress people looked for understanding to the past not the future this book argues that the discovery of america demonstrated that new knowledge was possible indeed it introduced the very concept of discovery and opened the way to the invention of science the first crucial discovery was tycho brahe s nova of 1572 proof that there could be change in the heavens the telescope 1610 rendered the old astronomy obsolete torricelli s experiment with the vacuum 1643 led directly to the triumph of the experimental method in the royal society of boyle and newton by 1750 newtonianism was being celebrated throughout europe the new science did not consist simply of new discoveries or new methods it relied on a new understanding of what knowledge might be and with this came a new language discovery progress facts experiments hypotheses theories laws of nature almost all these terms existed before 1492 but their meanings were radically transformed so they became tools with which to think scientifically we all now speak this language of science which was invented during the scientific revolution the new culture had its martyrs bruno galileo its heroes kepler boyle its propagandists voltaire diderot and its patient labourers gilbert hooke it led to a new rationalism killing off alchemy astrology and belief in witchcraft it led to the invention of the steam engine and to the first industrial revolution david wootton s landmark book changes our understanding of how this great transformation came about and of what science is

The Invention of Childhood 2012-10-31

The invention of childhood will paint a vivid picture of the lives of children in Britain from pagan Anglo-Saxon times to the present day drawing heavily on primary sources such as diaries, autobiographies, paintings, photographs, and letters. The book will present a complete chronological history of the experience of children in Britain during the past 1500 years. We will learn the key elements that have shaped their lives down the ages and how this has differed as a result of gender, geography, and ethnicity. The book will also relate children’s lives to larger events in national and international history. Written by Hugh Cunningham, the professor of history at the University of Kent at Canterbury and an expert on childhood history, the book will accompany the radio 4 series presented by the highly respected children’s author Michael Morpurgo. Michael is contributing a lengthy foreword to the book. The invention of childhood will expand on a number of key themes from the radio series including the idea of childhood as a distinct stage of life opinions on when childhood should start and end and how it differs from adulthood. Have changed considerably down the centuries and these inventions and reinventions of childhood hence the title have had a profound effect on children’s lives. The prolonged childhood we enjoy in Britain today was a luxury few could afford in the past. This fascinating study will draw attention to the ways in which we may find childhood and children in the past quite similar to the present and to ways in which children’s lives from the past seem to differ sharply from the lives children lead today.

in a focused and compelling discussion anis bawarshi looks to genre theory for what it can contribute to a refined understanding of invention in describing what he calls the genre function he explores what is at stake for the study and teaching of writing to imagine invention as a way that writers locate themselves via genres within various positions and activities he argues in fact that invention is a process in which writers are acted upon by genres as much as they act themselves such an approach naturally requires the composition scholar to re place invention from the writer to the sites of action the genres in which the writer participates this move calls for a thoroughly rhetorical view of invention roughly in the tradition of richard young janice lauer and those who have followed them instead of mastering notions of good writing bawarshi feels that students gain more from learning how to adapt socially and rhetorically as they move from one genred site of action to the next
