excerpt from the ford motor car and truck and tractor attachments their construction care and
operation when liquid gasoline is turned to a vapor or gas and mixed with air the mixture burns very
easily if this gasoline and air vapor is compressed into a small space it will ignite and burn so rapidly
that the action is like an explosion while burning this mixture increases in volume and the resulting
pressure is made to do the work of driving the car in order to use the force of this explosive burning the
mixture of gasoline vapor and air in the cylinder of an engine the upper end of this cylinder is
closed and the lower end is open as shown in figure 1 in the lower end is a piston which makes a gas
mixture very tight fit in the cylinder yet slides freely from end to end the burning mixture drives the piston down
toward the open end of the cylinder and this motion of the piston turns a shaft from which is secured
power to turn the wheels attached to the engine is a device called a carburetor which turns the liquid
gasoline into a vapor and mixes this vapor with the proper amount of air to make a combustible mixture
set fire to the gas an electric spark is caused to jump between two metal points inside of the engine
cylinder and in jumping through the mixture this spark ignites the gas about the publisher forgotten
