grid architectures which are viewed as tools for the integration of distributed resources play a significant role
as managers of computational resources but also as aggregators of measurement instrumentation and
pervasive large scale data acquisition platforms the functionality of a grid architecture allows managing
maintaining and exploiting heterogeneous instrumentation and acquisition devices in a unified way by
providing standardized interfaces and common work environments to their users this result is achieved
through the properties of isolation from the physical network and from the peculiarities of the instrumentation
granted by standard middleware together with secure and flexible mechanisms which seek access and
aggregate distributed resources this book focuses on a number of aspects related to the effective exploitation
of remote instrumentation on the grid these include middleware architecture high speed networking in
support of grid applications wireless grid for acquisition devices and sensor networks quality of service
