This book shares behind the scene stories of the emergence of leading retail companies in Malaysia. Several interviews were conducted which result in a few remarkable stories of different industries with their very own challenges—survival strategies and impactful outcomes for example. Malaysia's leading newspaper and magazine printing company Karangkraf, for instance, took 39 years to stabilize in the business world. This shows that entrepreneurs who are involved in the rat race of the business world need to be more proactive in dealing with environmental and technological changes to keep pace with the challenging demand. Therefore, it is hoped that this book can be a meaningful and practical guide to existing companies in Malaysia—old or new—in order to be a guideline for success in their endeavor to achieve local and global success.

This book covers a wide range of practical fluid mechanics, heat transfer, and mass transfer problems. It examines the basic laws: the conservation of matter, conservation of momentum, conservation of energy, and the second law of thermodynamics of these areas. It offers problem solutions that start with simplifying engineering assumptions and then identifies the governing equations and dependent and independent variables. When solutions to basic equations are not possible, the book utilizes historical experimental studies. It also looks at determining appropriate thermo physical properties of the fluid under investigation and covers solutions to governing equations with experimental studies.
